SECRET/CONTROL - U.S. OFFICIALS ONLY

a former German ammunition depot about 5 km north of
Schulzendorf near Gransee has been used as VP ammunition depot since 1952. A
single track railroad line was under construction southeast of the depot in
mid-1953. At that time, it could not be determined whether the line led into
the depot. The ammunition depot proper measured about 800 x 1,000 meters and
was surrounded by a circular board fence which was paralleled by a barbed-wire

mid-1953. At that time, it could not be determined whether the line led into the depot. The ammunition depot proper measured about 800 x 1,000 meters and was surrounded by a circular board fence which was paralleled by a barbed-wire fence. The five-meter strip between the two fences was cleared, ploughed and declared off limits. Watch towers were erected along the board fence. The depot was located in a dense woods of pine trees. The ammunition bunkers which were allegedly filled with artillery and infantry ammunition could not be seen from the watch towers. Only officers and workers had access to the depot, while the guard personnel were forbidden to enter the dump. The individual guard details employed at the beginning of July 1953 numbered about 28 men and were equipped with carbines, submachine guns, pistols and light machine guns. The following units picked up ammunition by truck at the beginning of July 1953:

KVP Spremberg, infantry and artillery ammunition

KVP Halle, infantry and tank ammunition

KVP Zeithain, infantry and tank ammunition

VPL Zeithain, infantry ammunition

KVP Frankenberg, infantry ammunition

KVP Prenzlau, infantry ammunition

KVP Prora, infantry and artillery ammunition. 4

- 6. In August 1953, 8 concrete bunkers, each of 50 x 30 meters, built into the earth and covered with sand, were observed in the VP ammunition depot at Gransee. All kinds of ammunition destined for the KVP were stored at the dump. 4
- 25X1 7. At the beginning of October 1953, by order of the Ministry of the Interior at Glinka Strasse, Berlin, the Bau-Union-Sued in Dresden consigned Government Order OB/3/2103/1 of 22 July 1953 to the VEB Anlagenbau Berlin VEM for Project 11-13-34 in Gorgast. Personalities at the Ministry of the Interior included Lieutenant Colonel Koehler, Captain Giess as department chief and Senior Lieutenant Vorwerk as officer in charge of project Gorgast. The order for the VEB Anlagenbau included the construction of lighting facilities at the construction site; interior installation work in the low administrative buildings, quarters, and bunkers; and the establishment of a high-tension installation with two transformers, including one with a capacity of 50 kVA and the other of 30 kVA. Source learned that ammunition bunkers for the KVP were to be constructed.2
- 8. The following is a complet list of rail shipments dispatched from the ammunition depot at Kapen in August and September 1953:
